

Repurposing Asphalt at Sunshine Canyon Landfill

November 30, 2018

SYLMAR, Calif. (Nov. 30, 2018) – As a responsible operator, the Sunshine Canyon Landfill team is committed not only to safe disposal, but also to opportunities to reuse and recycle some of the material that comes into the Landfill. For example, as a condition of our facility permit, the Landfill is allowed to accept up to 6,600 tons of beneficial reuse material per week. Most of this material is asphalt, which we repurpose at the site to build the five miles of internal roads our customers and employees use. During the rainy season, we also use this material to construct special platforms – called wet weather decks – that allow for safer maneuvering around the active disposal area in inclement weather. Once the rains have passed, we will reclaim the asphalt used for the wet weather decks to build other roads throughout the Landfill.
